CDAQ/HCCN

CDAQ Data Interoperability & Integration Initiatives

CDAQ's Data Warehouse project has enabled us to have automated data sharing capabilities. CDAQ has started pertinent initiatives with MCOs, ACOs and State HIEs to share and receive information through the Data Warehouse.

- VCHA is constantly working to bring MCOs and ACOs to the table as partners to leverage data and provide the maximum value for your health center.
- VCHA is in the process of building data dashboards using our data warehouse to look at aggregated patient data for UDS and other data points for patients that will capture individual health centers' data and compare it to overall Virginia's CHC data.
